Everest

Everest is a modern upholstered bed with concealed storage, defined by its distinct headboard. A sleek tubular steel frame supports any Queen size mattress without the need for a box spring and lifts up to reveal a large storage compartment.

The headboard is intentionally tall to provide full head support while sitting up in bed, while the gentle wedge shape of the lower half offers welcome lumbar support and imparts its appearance with a modern attitude. This unique design allows for an angled headboard while maintaining a small footprint suitable for use in small spaces.

BENSEN

Everest utilizes a European mattress support system that eliminates the need of a box spring and features an integrated steel frame, hydraulic lift mechanism, and curved wooden slats that can be adjusted for desired lumbar support.

Both the headboard and bed frame are constructed of laminated wood and multi-density foam for added comfort. Covers are attached with velcro and are removable for cleaning or replacement. An additional headboard protector cover is also available in white cotton, or matching fabric or leather. Large metal corner brackets make assembly easy and ensure the bed remains solid and silent over time. The inside of the storage compartment is carefully detailed with a durable black fabric and grey laminate floor panels that are easy to clean.

Available in all fabrics and leathers.
